

| Course | Bachelor of Pharmacy (B.Pharm.) | Semester - 1 | | |
|------------------|--|--------------|--|--|
| Type of Course | Core Courses | | | |
| Prerequisite | | | | |
| Course Objective | Students would have studied about the gross morphology, structure and functions of cell, skeletal, muscular, cardiovascular system of the human body. They would have understood the various homeostatic mechanisms and their imbalance Students would able to identify the different types of bones in human body. Students would be able to identify the various tissues of different systems of human body. Students would learn about the various experimental techniques related to physiology. They would have learnt various techniques like blood group determination, blood pressure measurement, blood cells counting | | | |

| Course | Bachelor of Pharmacy (B.Pharm.) | Semester - 1 | |
|------------------|---|--------------|--|
| Type of Course | Core Courses | | |
| Prerequisite | | | |
| Course Objective | Learning this subject content will develop the ideas with the fundamental of analytical chemistry among the pupil. It constructs the fundamental methodology to prepare different strength of solutions. It facilitates the fellow pupil to predict the sources of mistakes and errors. It helps to develop the fundamentals of volumetric analytical skills. It peculates the basic knowledge in the principles of electrochemical analytical techniques The student interpretation skills will be improve by the course content in terms of choice of analytical techniques to perform the estimation of different category drugs. | | |

| 1 | Flow of fluids, Size Reduction, Size Separation: | 10 | 20 |
| | · | | |

Flow of fluids: Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer. Size Reduction: Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill. Size Separation: Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank.

2 Heat Transfer, Evaporation, Distillation

10 25

Heat Transfer: Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers. Evaporation: Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator& Economy of multiple effect evaporator. Distillation: Basic Principles and methodology of simple distillation, flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation

3 Drying, Mixing 8 20

Drying: Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer, freeze dryer.

Mixing: Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silverson Emulsifier.

4 Filtration, Centrifugation

20

8

Filtration: Objectives, applications, Theories & Factors influencing filtration, filter aids, filter Medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seitz filter. Centrifugation: Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.

| Type of Course | Core Courses |
| Prerequisite | 23990104 - PHARMACEUTICAL INORGANIC CHEMISTRY – THEORY |
| Course Objective | Students understand the importance of metabolism of substrates. Will acquire chemistry and biological importance of biological macromolecules. They acquire knowledge in qualitative and quantitative estimation of the biological macromolecules. They know the interpretation of data emanating from a Clinical Test Lab. Students would able to know how physiological conditions influence the structures and re-activities or biomolecules. They would able to understand the basic principles of protein and polysaccharide structure. |

| Prerequisite 23990101-T - HUMAN ANATOMY AND PHYSIOLOGY I – THEORY | | | | | | |
| Course Objective | Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes. This course is designed to impart a thorough knowledge of the raspects of pathology of various conditions with reference to its pharmacological application understanding of basic pathophysiological mechanisms. Hence it will not only help to study of pathology, but also to get baseline knowledge required to practice medicine safely, contrationally and effectively. Upon completion of the subject student shall be able to — 1. To describe the etiology and pathogenesis of the selected disease states; 2. To name the signs and symptoms of the diseases; 3. To mention the complications of the diseases | ns and y the syllabus | | | | |

| Type of Course | Core Courses | | | |
| Prerequisite 23990404-T - PHARMACOLOGY I – THEORY | | | | |
| Course Objective | 1. Students would have understood the mechanism of drug action and its relevance in the treatment of different diseases 2. They would be trained with isolation of different organs/tissues from the laboratory animals by simulated experiments 3. They would have observed the various receptor actions using isolated tissue preparation 4. Students would appreciate the correlation of pharmacology with related medical sciences 5. They would have understood the cell communication mechanism 6. They would appreciate the newer targets of several disease conditions for treatment. | | | |

| Prerequisite | 23990305-T - PHARMACOGNOSY AND PHYTOCHEMISTRY I - THEORY | | | | |
| Course Objective | This course is one of the most advanced introductionsin Herbal Medicines that is offered. Will learn and get experience about Herbs, and their Science. Classification of Medicinal Plants, Phytochemistry, Carbohydrates, Lipids, Terpenes, Polyphenols, Alkaloids, Pharmacology, Toxicity, Formulations and Preparations of Herbal Medicines. How herbs influence our physiology and can be helpful against several disorders. Relationsbetween Phyto-therapy and the Elderly, Phytotherapy and Children, Understanding Herbal Action, and Understanding the MateriaMedica. The recognition of medicinal plants, identification of adulteration and Contamination. Ethnobotany&Ethnopharmacology in drug discovery process. DNA Finger printing. | | | | |

|------------------|--|--------------|
| Type of Course | Core Courses | |
| Prerequisite | 23990504-T - PHARMACEUTICAL MICROBIOLOGY – THEORY | |
| Course Objective | Students will be able to acquire, articulate, retain and apply specialized language and knowledge relevant to microbiology. Students will acquire and demonstrate competency in laboratory safety and in routine and specialized microbiological laboratory skills applicable to microbiological research or clinical methods, including accurately reporting observations and analysis. Students will communicate scientific concepts, experimental results and analytical arguments clearly and concisely, both verbally and in writing. Students will demonstrate isolation of and identification of microbes. Students can able to design microbiology laboratory considering all the aspects of safety Students will acquire knowledge about validating the microbiological equipment and reporting the observations | |

| Sr. | Topics | | Т | w | |
| 1 | Introduction, h | istory of microbiology | 10 | 24 | |
| | Introduction, history of microbiology, its branches, scope and its importance. Introduction to Prokaryotes and Eukaryotes Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count). Study of different types of phase constrast microscopy, dark field microscopy and electron microscopy. | | | | |
| 2 | Identification of | of bacteria using staining techniques | 10 | 23 | |
| | Identification of bacteria using staining techniques (simple, Gram's &Acid fast staining) and biochemical tests (IMViC). Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous, radiation and mechanical method sterilization. Evaluation of the efficiency of sterilization methods. Equipments employed in large scale sterilization. Sterility indicators | | | | |
| 3 | Study of morpl | hology | 10 | 23 | |
| | Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses. Classification and mode of action of disinfectants Factors influencing disinfection, antiseptics and their evaluation. For bacteriostatic and bactericidal actions Evaluation of bactericidal & Bacteriostatic. Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP, BP and USP. | | | | |
| 4 | Designing of as | septic area, laminar flow equipment | 8 | 17 | |
| | Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification. Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids. Assessment of a new antibiotic. | | | | |

| Prerequisite | 23990305-T - PHARMACOGNOSY AND PHYTOCHEMISTRY I - THEORY | | | | | | |
| Course Objective | The aim of the degreecourse is to provide graduates with a good knowledge of the basic and applied know-how and professional skills in Herbal drug Science and Technology and the necessary training for admission to the postgraduate courses in this field. They will acquire operative know-how and be able to carry out technical and management tasks and professional activities in the areas of transformation of medicinal herbs, management of the quality of the processes, marketing of medicinal plants and derivatives for use in herbal, food and cosmetic products, Guaranteeing conformity with the national and EU laws in force. At the end of the course, the graduate will have acquired the following knowledge and the recognition, collection and preservation of medicinal plants. Analyses and dosage of active ingredients. The biological effects of medicinal plants. The toxicological aspects of active ingredients and finished products. | skills: | | | | | |

| Course Objective | After successful completion of the course student will be able to understand the various drug delivery system and its mechanisms. Students will learn advanced drug delivery system early stage. Developing a preparation of the drug which is both stable and acceptable to the patient. They know very well about orally administered drugs, injectables, aerosol and semisolid preparations with standard protocols. Formulated drugs are stored in a suitable container closure system for extended periods of time. Also they know the stability study and its standard evaluation procedure for better storage condition | |

| 1 Preformulation Studies | | Studies | 7 | 13 |

Preformulation Studies: Introduction to preformulation, goals and objectives, study of physicochemical characteristics of drug substances.

- 1. **Physical properties:** Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pKa, pH, partition coefficient), polymorphism
- 2. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerization

BCS classification of drugs & its significant

Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

2 Tablets 10

Tablets:

- 1. Introduction, ideal characteristics of tablets, classification of table Excipients, Formulation of tablets, granulation methods, compression and processing problems. Equipments and tablet tooling.
- 2. Tablet coating: Types of coating, coating materials, formulation of coating composition, methods of coating, equipment employed and defects in coating.
- 3. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in pharmacopoeia

| Prerequisite 23990702-T - INDUSTRIAL PHARMACYII – THEORY | | | | |
| Course Objective | They know the various pharmaceutical dosage forms and their manufacturing techniques. Students would able to know various considerations in development of pharmaceutical dosage forms They able to formulate solid, liquid and semisolid dosage forms and evaluate them for their quality. | | | |

|------------------|---|--------------|
| Type of Course | Core Courses | |
| Prerequisite | 23990703-T - PHARMACY PRACTICE – THEORY | |
| Course Objective | Students will demonstrate knowledge of and ability to use principles of therapeutics, quality improvement, communication, economics, health behavior, social and administrative aspects, health policy and legal issues in the practice of pharmacy. Students will use knowledge of drug distribution methods in hospital and apply it in the practice of pharmacy. Students will effectively apply principles of drug store management and inventory control to medication use. Students will provide patient-centered care to diverse patients using the best available evidence and monitor drug therapy of patient through medication chart review, obtain medication history interview and counsel the patients, identify drug related problems. Students will engage in innovative activities by making use of the knowledge of clinical trials | |

| 1 | Introduction to Pharmacovigilance: | 10 | 23 | | | |
| | History and development of Pharmacovigilance Importance of safety monitoring of Medicine WHO international drug monitoring programme Pharmacovigilance Program of India(PvPI) | | | | | |

Introduction to adverse drug reactions:

- Definitions and classification of ADRs
- **Detection and reporting**
- Methods in Causality assessment
- Severity and seriousness assessment
- Predictability and preventability assessment
- Management of adverse drug reactions

Basic terminologies used in pharmacovigilance:

- Terminologies of adverse medication related events
- Regulatory terminologies

- Anatomical, therapeutic and chemical classification of drugs
- International classification of diseases
- Daily defined doses

Drug and disease classification:

2

International Non proprietary Names for drugs

Drug dictionaries and coding in pharmacovigilance:

- WHO adverse reaction terminologies
- MedDRA and Standardised MedDRA queries

Information resources in pharmacovigilance:

- WHO drug dictionary
- Eudravigilance medicinal product dictionary Basic drug information resources

Establishing pharmacovigilance programme:

- Specialised resources for ADRs Establishing in a hospital
- Establishment & operation of drug safety department in industry
- Contract Research Organisations (CROs)
- Establishing a national programme

|--------|-----------------------|---|--|--|--|--|
| At the | e end of this cou | urse, students will be able to: | | | | |
| CO1 | | e roles and interactions of ingredients, predicting compatibility and stability, ensuring informed ingredient Ife and effective products. | | | | |
| CO2 | _ | ic products, balancing ingredient ratios, overcoming challenges, and creating prototypes with desired sensory performance outcomes. | | | | |
| CO3 | Navigate regulations. | ations, assess ingredient risks, and conduct stability tests to develop compliant and safe cosmetic | | | | |
| CO4 | 1 - | tive trends like sustainable formulations, nanotechnology, and digital integration, adapting them to create ng cosmetic products. | | | | |
| CO5 | | ner perception assessment, interpret data, and refine formulations to align with user preferences, ensuring both scientific and consumer demands. | | | | |

23990812-T - DIETARY SUPPLEMENTS AND NUTRACEUTICALS -**THEORY**

| Course | Bachelor of Pharmacy (B.Pharm.) Semester - 8 | | | | | |
|------------------|--|--|--|--|--|--|
| Type of Course | Core Elective Courses | | | | | |
| Prerequisite | 23990404 - PHARMACOLOGY I-THEORY | | | | | |
| Course Objective | This module aims to provide an understanding of the concepts behind the theoretical applications of dietary supplements. By the end of the course, students should be able to: 1. Understand the need of supplements by the different group of people to maintain healthy life. 2. Understand the outcome of deficiencies in dietary supplements. 3. Appreciate the components in dietary supplements and the application. 4. Appreciate the regulatory and commercial aspects of dietary supplements including health claims. | | | | | |
